Backend Development: GoFiber, Node.js, Laravel(Basic), Restful APIs, System Design

Databases: PostgreSQL, Oracle, MySQL, SQLite(Basic), MongoDB(Basic)

Tools and Tech: Git / GitHub, Docker, Postman, Figma, Linux(Basic)

Additional Skills: Problem Solving, Teamwork, Communication, Fast learning, Self-Driven Learner, Adaptability, Leadership

EDUCATION

Maharakham University

Bachelor of Science (B.Sc.) in Information Technology | Graduated: October 2025

EXPERIENCES

X10 IT Resource Co., Ltd.

Intern Full Stack Developer

December 2024 - March 2025

Led the database design for a Dual-System architecture (POS & Warehouse) and developing front-end UX/UI Warehouse Management application, ensuring seamless data flow and user experience

- Architected foundational relational database schemas for both POS and Warehouse systems, establishing strict referential integrity with cascading deletes to ensure robust data consistency.
- Designed and developed a responsive React-based frontend UI/UX for the warehouse management system, streamlining daily operational workflows.
- Implemented Role-Based Access Control (RBAC) and structured employee onboarding workflows to strengthen system security and user access management.
- Developed comprehensive logistics modules enabling efficient branch coordination and real-time transportation tracking.
- Engineered an automated cross-database synchronization mechanism to instantly dispatch and push updated data to the POS database following successful product shipments.

University - Senior Project

Front End Developer

November 2023 - October 2024

Designed and developed a service management system for automotive repair and bodywork client in Roi Et, Thailand, as a senior project with the Vice President as an advisor.

- Designed and developed a comprehensive web-based Admin Dashboard acting as the centralized control hub for end-to-end auto body shop operations.
 - Engineered an automated digital workflow for the vehicle repair lifecycle, streamlining CRUD management for critical documents from vehicle intake and quotation to final invoicing and release.
 - Developed dedicated integration modules to manage complex paperwork and coordinate seamlessly with external stakeholders, including insurance providers, parts suppliers, and car dealers.
 - Implemented an automated analytics and reporting module to aggregate operational data, generating actionable monthly and annual performance summaries for business stakeholders.
-

PROJECT

Job Portal Platform (Full-Stack Web Application): github.com/FozTheFox/Skills-JobApp

A solo dev, end-to-end recruitment platform designed to connect job seekers with employers seamlessly.

- Engineered a streamlined applicant workflow featuring an automated A4-style PDF resume generator, advanced job filtering, and a direct application system supporting custom cover letters.
- Developed a comprehensive employer dashboard to facilitate company profile management, dynamic job posting controls, and real-time applicant tracking.
- Implemented robust core security measures utilizing JSON Web Tokens (JWT) for secure authentication and strict Role-Based Access Control (RBAC) to isolate Applicant and Company API endpoints.
